Product Details: One Step

Totally New Body Cleanse, Antioxidant, Anti-Aging, Weight Loss, Immune Support, Intestinal Health Formula...All in One Step™

Dietary supplement beverage mix for body cleansing, weight loss, antioxidant, anti-aging, immune support and intestinal health. Ingredients: Arcon VF hypoallergenic, predigested soy protein concentrate, rice bran, lecithin, colloidal magnesium, glucosamine HCl, Nopal (detoxifier and sugar regulator), colloidal calcium, MSM (methyl sulfonyl methane), beta 1,3 glucans, inulin, gamma oryzanol, L-glutamine, L-ornithine, L-aurine, vitamin E succinate, CitriMax®, globulin protein, Ester C®, ascorbic **acid**, trimethylglycine, citrus bioflavonoid 5X complex, aloe isolate, zinc ascorbate, pantothenic **acid**, pyridoxine HCl, inositol, creatine pyruvate, Siberian ginseng extract, Betatene® (lycopene and mixed carotenoids), alpha lipoic **acid**, manganese ascorbate, borage oil, NovaSoy® (soy isoflavones), gugulipid extract, Leci-PS® (phosphatidyl serine), beta carotene, niacinamide, L-glutathione, quercetin, copper amino **acid** chelate, seleno-L-**methionine**, Atlantic sea kelp, lutein, pyridoxal-5'-phosphate, Ginkgo biloba leaf extract, grape seed extract, grape skin extract, Bioperine® (black pepper extract), mixed tocotrienols, coenzyme Q10, Pycnogenol®, boron, natural vanilla and other natural flavors, stevia.

SUPPLEMENT FACTS: (Powder Only)

Servings per Container: approx 30

Serving Size: 1 level scoop
(approx. 31 g.)

Amount per Serving:

**% Daily
Value**

Calories	120	
Calories from fat	27	
Total Fat	3 g.	5%
Saturated fat	0.625 g.	<1%

Cholesterol	0 g.	0%
Sodium	<1%	28 mg.
Potassium	419 mg.	17%
Total Carbohydrate	12 g.	3%
Dietary Fiber	6 g.	24%
Sugars	1 g.	
Protein	11 g.	22%

With the following vitamins and minerals:

Vitamin A	5000 I.U.	100%
Vitamin C	177 mg.	293%
Vitamin D	200 I.U.	50%
Vitamin E	70 I.U.	233%
Vitamin K	40 mcg.	50%
Thiamin (B-1)	3 mg.	200%
Riboflavin (B-2)	3 mg.	176%
Niacinamide (B-3)	13 mg.	65%
Vitamin B-6	30 mg.	1500%
Folate (folic acid)	446 mcg.	112%
Vitamin B-12	250 mcg.	4168%
Biotin	150 mcg.	50%
Pantothenic Acid	23 mg.	230%
Calcium	326 mg.	33%
Iron	3 mg.	17%
Phosphorus	266 mg.	27%
Iodine	38 mcg.	25%
Magnesium	255 mg.	64%
Zinc (as zinc ascorbate)	8 mg.	53%
Selenium	40 mcg.	57%
Copper (as copper amino acid chelate)	2 mg.	100%
Manganese (as manganese ascorbate)	6 mg.	300%
Chromium (as chromium nicotinate)	100 mcg.	83%
Molybdenum	13 mg.	17%
Chloride	175 mg.	5%

Amino acids from soy protein and rice bran:

Aspartic Acid	1583 mg.	Methionine	202 mg.
Threonine	551 mg.	Isoleucine	691 mg.
Serine	696 mg.	Leucine	1109 mg.
Glutamic Acid	2491 mg.	Tyrosine	499 mg.
Proline	755 mg.	Phenylalanine	723 mg.
Glycine	630 mg.	Histidine	371 mg.
Alanine	637 mg.	Lysine	888 mg.
Cysteine	378 mg.	Arginine	1028 mg.
Valine	740 mg.	Tryptophan	173 mg.

SUGGESTED USE: Twice daily, once in the morning and once in the afternoon, blend, shake or briskly stir 1 level scoop (approx. 31 grams) of All in One Step™ powder into 8 fluid ounces of chilled water or juice. For best results, All in One Step™ should be used in conjunction with a low allergen diet.

Beverage Mix Based on Latest Nutritional Research

The cleansing, healing One Step™ formula is a totally new nutritional supplement beverage mix. Other metabolic cleansing/support products on the market are based on ten-year-old nutritional data. Some of these products boast that their formulas are patented; however, since the patent process takes years to achieve through the U.S. Patent Office, the research upon which they are based is now outdated. Patent protection is lost if the formulas are changed.

Nutritional research and technology has advanced dramatically in the past ten years. The One Step™ formula is based on the most current nutritional research and will be updated as dictated by new and viable clinical research.

Therapeutic quantities of all essential vitamins and minerals plus an array of accessory nutrients make One Step™ the most comprehensive nutritional supplement beverage mix available for:

- Total body cleansing and detoxification programs.
- Weight loss programs.
- Intestinal cleansing and repair for improving digestive disorders and "leaky gut" syndrome.
- Antioxidant support to combat destructive "free radical" molecules.
- Restoring and revitalizing weakened or compromised immune function.
- Slowing or reversing many of the effects of the aging process.

Hypoallergenic, Enzymatically Predigested Soy Protein

Protein is the primary source of building materials for the body. Soy

was chosen as the protein source for One Step™ because it is the only plant protein that is complete (containing all essential amino acids) for human needs. The Arcon VF® soy protein concentrate used in One Step™ has been enzymatically predigested to remove common allergens, improve digestibility and bioavailability.

The human body requires protein to grow, function and repair itself properly. Soy protein is not only free of cholesterol and low in saturated fat, but over the past 30 years, more than 40 clinical studies have shown that soy protein reduces cholesterol in humans. In studies with athletes and body builders, those who supplemented with soy protein saw an increase in lean body mass, a decrease in body fat, an increase in hemoglobin (oxygen carrier), and less fatigue after exercise.⁽¹⁾

Soy was once considered an inferior protein, based on the old Protein Efficiency Rating (PER). Actually the PER assessed the protein needs of newly weaned baby rats, not humans. Compared to milk and egg proteins, soy is low in **methionine** which baby rats need because they have a full coat of hair covering their entire body.

Established in 1990, and directly applicable to humans, the Protein Digestibility-Corrected Amino Acid Score (PDCAAS) is patterned after human amino acid requirements. Corrections for digestibility are applied to give a protein-quality rating that's much closer to reality. This revised protein rating system gives soy protein the highest protein quality rating attainable.⁽¹⁾

Soy Isoflavones

In cultures, where soy is a major source of protein, there is a significantly lower incidence of coronary heart disease, breast and prostate cancers, osteoporosis and menopausal symptoms. Many of the health benefits attributed to soy may be related to its rich isoflavone content. Research suggests that soy isoflavones act in four distinct ways: as estrogens and antiestrogens, as cancer-enzyme inhibitors, as antioxidants and as immune enhancers. Isoflavones have an estrogenic effect, but the effect is weaker than that of estrogen. As an antiestrogen, isoflavones compete with estrogen at receptor sites, and because their effects are weaker, can blunt the effect of estrogen (helpful in PMS). In addition to its soy protein, One Step™ adds NovaSoy®, concentrated soy isoflavones including genistein, shown to directly inhibit growth of a wide range of cancer cells, and daidzein which fights osteoporosis by promoting bone development and reducing bone breakdown.⁽²⁾

Vitamins and Minerals

One Step™ supplies essential vitamins and minerals in therapeutic amounts so that, as the body is cleansed and toxins are removed, the nutrients needed to repair, rebuild and revitalize are immediately available.

The B Complex vitamins are particularly important since they are so meagerly supplied in the diet of most Americans. Fatigue, irritability, nervousness and depression are just a few symptoms associated with a lack of B vitamins. Because these are so interrelated in function, it is important that all are taken together. B vitamins are necessary for

metabolism of carbohydrates, fats and proteins which makes them essential for energy production. They are also necessary for normal functioning of the nervous system, maintenance of muscle tone in the gastrointestinal tract and for health of the skin, hair, eyes, mouth and liver.⁽³⁾

The One Step™ formula also provides major minerals and trace minerals which play an important role in various bodily functions. Calcium and magnesium are provided in the colloidal form for maximum absorption and utilization by the body. Chromium in the biologically active form of niacin-bound chromium polynicotinate, is used for its ability to regulate blood-sugar and lower cholesterol,⁽⁴⁾ as well as for its role in reducing body fat. MSM (methyl sulfonyl methane) supplies a usable source of organic sulfur that is essential for building healthy new cells.

Antioxidants

Research in the field of antioxidant nutrients has taken a giant leap in the past few years. One Step™ supplies therapeutic quantities of the antioxidant vitamins A, C, E and beta carotene, but it doesn't stop there. In addition to beta carotene, One Step™ contains Betatene®, a balanced blend of five mixed carotenoids including alpha-carotene, zeaxanthin, cryptoxanthin, lutein and lycopene. The effects of these carotenoids are seen in different areas of the body. Lutein and zeaxanthin, for example, show the strongest protective effect against macular degeneration. Lycopene appears to protect against cancer of the mouth, pharynx, esophagus, stomach, colon, rectum and prostate. The less saturated tocotrienol form of vitamin E is also included in One Step™. Research over the past five to ten years indicates that tocotrienols may have more powerful antioxidant effects than vitamin E, particularly in certain lipid cell membranes and in brain cell mitochondria. Tocotrienols can also help lower elevated cholesterol by normalizing the rate of breakdown of HMG CoA-reductase. If this enzyme is accelerated or overactive, it creates excess cholesterol. Clinical trials also indicate that tocotrienols can halt and even lessen a buildup of atherosclerotic plaque. In laboratory studies on a variety of cancers including breast cancer and melanoma, tocotrienols in the growth media significantly reduced or halted the cancer growth.⁽⁵⁾ The amino acid tri-peptide, glutathione, is the main defense against oxidative stress generated by cellular respiration. It appears to be especially important in organs exposed to exogenous toxins such as the liver, kidneys, lungs and intestines. Glutathione blocks cell damage throughout the body by neutralizing and breaking down free radicals, rejuvenates immune function, detoxifies oxidized or rancid fats in the intestines and can deactivate at least thirty cancer causing substances. Glutathione levels, which tend to drop dramatically between ages 40 and 60, have recently been identified as a strikingly accurate biomarker, distinguishing healthy people over age sixty from those with disease. Subjects with 20 percent higher blood glutathione had only one-third the rates of arthritis, high blood pressure, heart disease, circulatory symptoms, diabetes, stomach symptoms and urinary tract infections as

those with lower glutathione.⁽⁶⁾

Alpha-lipoic **acid** functions both as an antioxidant and as a coenzyme in the metabolism of sugars for production of cellular energy. From lipoic **acid** the body manufactures dihydrolipoic **acid**, a powerful and unique antioxidant that works in both the lipid and aqueous parts of the cells. Lipoic **acid** and dihydrolipoic **acid** neutralize both oxygen and nitrogen free radicals. Lipoic **acid** also works to recycle vitamins C and E and it increases glutathione levels in cells.^(20,21)

As a coenzyme in sugar metabolism, lipoic **acid** speeds breakdown and burning of sugar, which occurs primarily in muscle cells, and may actually increase energy levels and strength in muscle cells. In early experiments, lipoic **acid** increased the burning of glucose in a way that was comparable to, but independent of, insulin.^(22,23)

CoQ10 is present in the mitochondria of human cells and is a cofactor in several metabolic pathways, particularly oxidative phosphorylation. CoQ10 is also a membrane stabilizer and has been shown to increase antioxidant protection in membranes. The mitochondria are prime targets of free radical damage in brain cells, leading to decline in mental function. Because of its importance in protecting the mitochondria, CoQ10 may help prevent degenerative brain diseases such as Alzheimer's.

Flavonoids

Over 4,000 flavonoid compounds have been characterized and classified according to chemical structure. Since flavonoids are active against a wide variety of free radicals and different flavonoids seem to have a preference for specific tissues, One Step™ supplies flavonoids from a variety of sources including:

- Citrus Bioflavonoid 5X Complex, an undiluted blend of hesperidin, naringin and **rutin** that is five times more potent than bioflavonoids used in most supplements.
- Quercetin appears to reduce allergic processes, inhibit replication of both RNA and DNA viruses and inhibit mast cell degranulation which causes tissue destruction in rheumatoid arthritis. It also inhibits the release of histamine and other inflammatory mediators by stabilizing mast cells and basophils; inhibits several enzymes to prevent inflammation; decreases leukotriene formation, lipid peroxidation and collagen breakdown.⁽⁷⁾
- Anthocyanidins and proanthocyanidins from Pycnogenol® and from grape skin and grape seed extracts have an affinity for connective tissues, particularly collagen and elastin. These flavonoids work with vitamin C to help regenerate collagen and shield it from free radical attack. Together these nutrients strengthen and restore permeability to capillaries allowing more oxygen, nutrients, enzymes and hormones to pass through cell membranes. This "protect and repair" function promotes smoothness and elasticity of skin, improved circulation in the extremities and increased memory capacity (since

proanthocyanidins cross the blood-brain barrier).⁽⁸⁾

- In addition to cardiovascular protection, resveratrol, a phenolic flavonoid found in grape skins, made the news when it was shown in cell cultures and animal studies to block the action of cancer-causing agents, inhibit development and growth of tumors and cause precancerous cells to revert to normal.⁽⁹⁾
- Ginkgo biloba extract contains flavonoids that have demonstrated remarkable effects on circulatory and nervous system functions including enhanced energy, increased cellular glucose uptake, inhibition of platelet aggregation, increased blood flow to the brain and improved transmission of nerve signals as well as antioxidant activity.⁽⁶⁾

Fiber and Accessory Nutrients

Adequate dietary fiber is essential for intestinal health. One Step™ provides six grams of dietary fiber per serving from rice bran and guar gum. As an intestinal cleanser and detoxifier, dietary fiber can bind cholesterol as well as cancer promoting compounds and other toxins. Because of its bulk, it also suppresses the appetite producing a feeling of fullness.

The amino **acid** L-glutamine and the amino sugar glucosamine are needed to maintain and repair the intestinal lining. The mucosal lining of the small intestines allows absorption of nutrients and, at the same time, provides a protective barrier to keep out undesirable molecules. When a breakdown in that barrier results in increased intestinal permeability or "leaky gut syndrome", neither function is performed successfully.

L-glutamine is the only substance other than glucose that can be used as fuel by the brain. Supplemental L-glutamine also increases glutathione levels and is used to reduce cravings for sugar, carbohydrates and alcohol.⁽¹⁰⁾ Glucosamine plays a crucial role in connective tissue synthesis and is needed for maintenance and repair of joints, ligaments and tendons. Inulin, a fructo-oligosaccharide, is added to One Step™ to support the growth and proliferation of beneficial bacteria in the intestines. It also has a beneficial effect on blood sugar control.⁽⁸⁾

Bioperine® is a patented extract of black pepper which significantly increases absorption of many nutrients.⁽¹²⁾

Aloe isolate is freeze dried aloe vera mucilaginous polysaccharide, a functional component of aloe vera. Aloe vera taken internally is known for regulating the bowel. Preliminary studies and anecdotal reports also indicate a tonic and anti-ulcer effect. The polysaccharide component of aloe vera, acemannan, shows significant immune enhancing and antiviral activity.⁽⁸⁾

Beta-1,3-glucan, an extract of the cell wall of bakers yeast, has been shown to enhance macrophage function dramatically, and to increase resistance to a variety of bacterial, viral, fungal and parasitic infections. The dried leaves of the prickly pear cactus, also known as nopal, are rich in nutrients and phytochemicals that nutritionally support the liver and pancreas. Nopal also helps remove ammonia free radicals and environmental toxins such as alcohol and cigarette smoke.

Gamma oryzanol, a strong antioxidant extracted from rice bran, has

been used as an alternative to anabolic steroids to stimulate production of growth hormone. It has also been used as a safe, and effective treatment for lipid abnormalities(13) and as an effective treatment for a broad range of gastrointestinal disorders including stress-induced gastric and duodenal ulcers.(14)

Gugulipid and lecithin are used for their effects on lipid metabolism. Gugulipid, the oleoresin of the Indian herb Commiphora mukul or gum guggul, has been shown to effectively lower elevated cholesterol and triglycerides and reduce body weight in obese individuals with elevated blood lipids.(15) TMG (trimethylglycine) is added to One Step™ to detoxify homocysteine. In a group of patients with early-onset arteriosclerosis, elevated blood homocysteine was found to be a greater risk factor than high cholesterol, high blood pressure or cigarette smoking.(16)

Siberian ginseng is used for its "adaptogenic" effects. Studies indicate that this herb increases the ability of humans to withstand many adverse physical conditions (noise, heat, motion, intense work load, exercise, illness); increases mental alertness and work output; improves quality of work under stressful conditions; and improves athletic performance.(8) Creatine pyruvate (patent pending) is a combination of two outstanding energy supplements. Creatine, found in high concentrations in skeletal and **cardiac** muscle, brain and sperm cells, plays an important role in energy transfer. Creatine supplementation significantly reduces fatigue, enabling subjects to perform for longer periods at speeds close to maximum. Recovery from intense activity is also much faster.(17)

As an energy booster, pyruvate has been shown to increase exercise performance as it enhances the transport of glucose into the cells. Pyruvate increases metabolic rate without raising blood pressure or heart rate and weight loss, particularly fat loss, is enhanced.(18)

CitriMax® contains (-)-hydroxycitric **acid**, the active component of the herb Garcinia cambogia. Its success in promoting loss of body fat is linked to its relationship with citrate lyase, an enzyme needed for the formation of acetyl Coenzyme A. As a result of this action, fat burning speeds up, appetite is suppressed, metabolic rate increases, stamina and endurance are enhanced, fat production is inhibited and protein is spared.(19)

The phospholipids, particularly phosphatidyl serine (Leci-PS®) promote membrane fluidity which is crucial for cellular responsiveness and for the cell's processing of nutrients and information. Phosphatidyl serine also enhances the efficiency of glucose to "energize" the brain and improve overall performance.(24)
